## Use case diagrams

### Borrowing Process Use Case Diagram

- **Actors:** User, Admin
- **Use Cases:** Borrow Book, Reserve Book, Return Book, Check Book Availability, Extend Borrowing Period, Pay Fine (User), Manage Borrow Records (Admin).

## Library and Book Management Use Case Diagram

- **Actors:** Admin, User
- **Use Cases:** Add New Library (Admin), View Library Details, Add New Book (Admin), View Book Details, View books read in the past, Update Book Information (Admin), Update Library Information (Admin), Search for Books, Search for Libraries, View Borrowing Statistics (Admin).

## User Management Use Case Diagram:

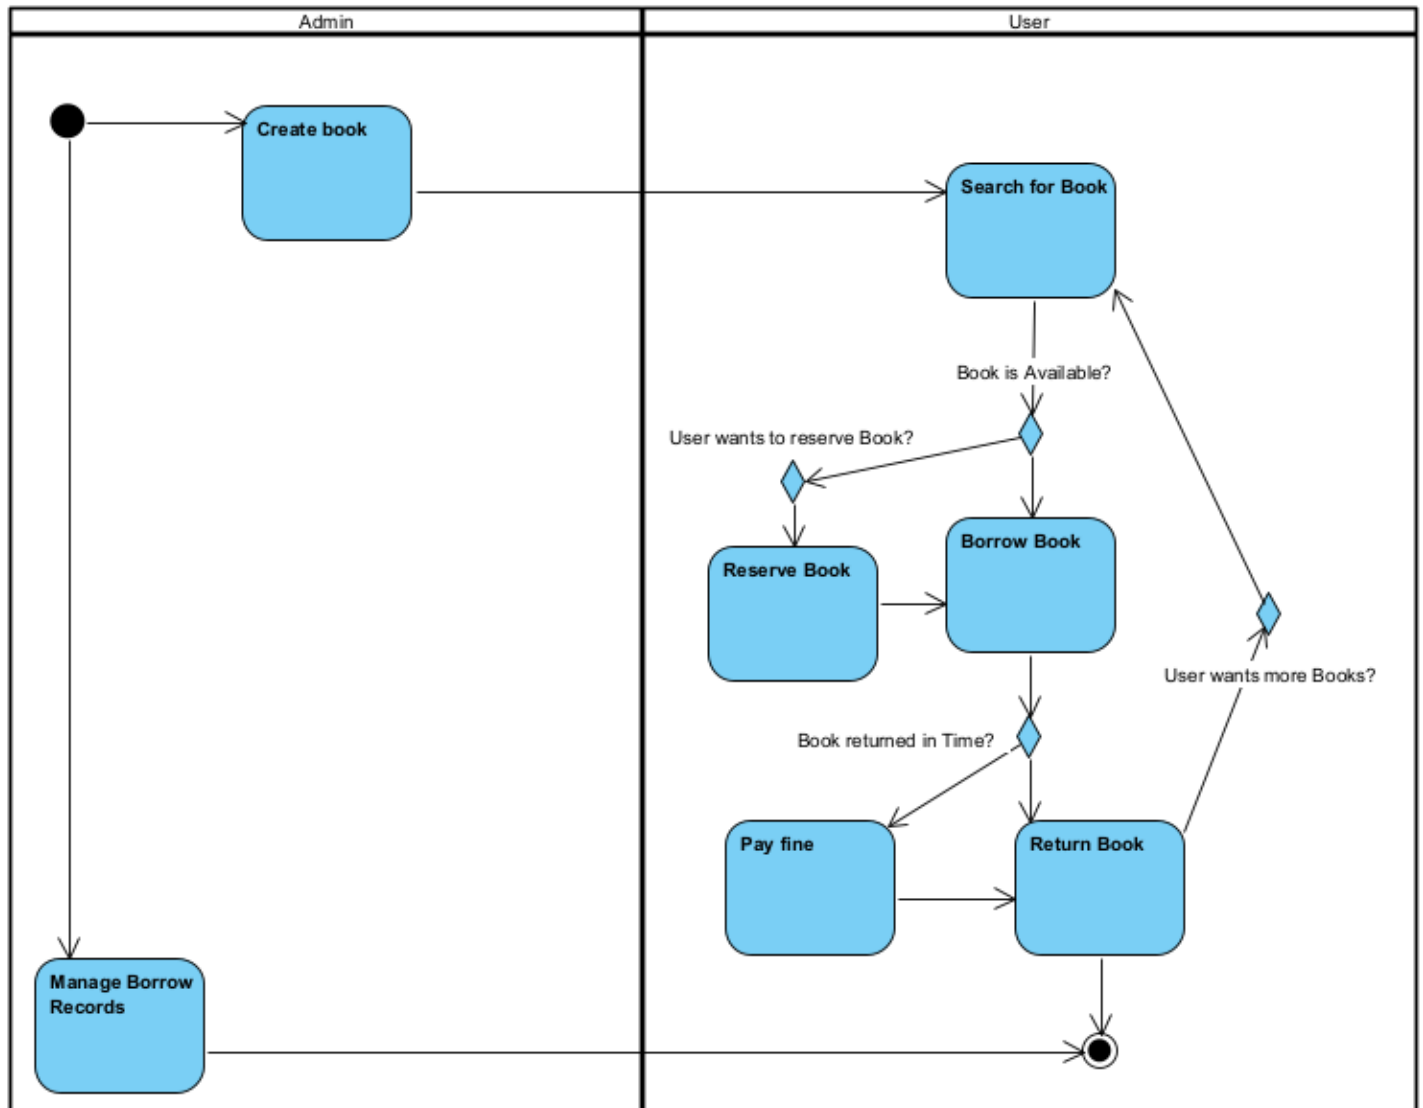

- **Actors:** Admin, User
- **Use Cases:** Register, Login, Update Profile, View User Details, Manage User Roles (Admin only), Delete Account, Manage Users (Admin only).

## Activity diagram

### Borrowing Process

act [Borrowing Process]

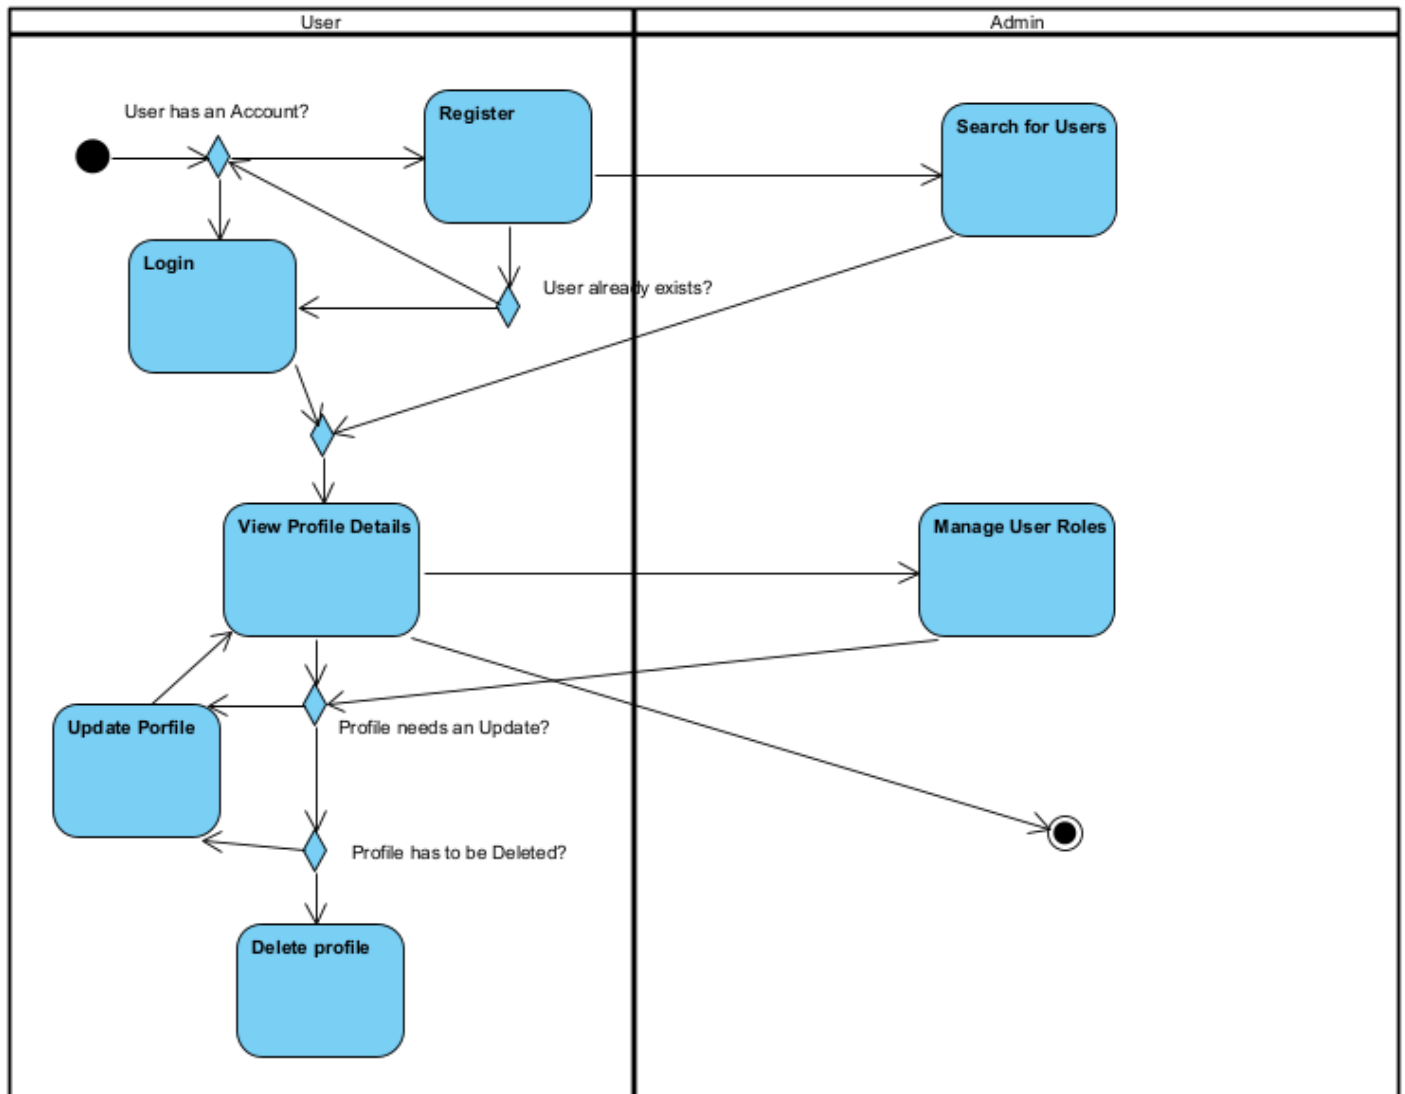

**Actors:** Admin, User

The Admin can initiate the process by creating a new book entry, which becomes accessible to the User for searching and borrowing. The User starts by searching for a book. If the book is available, the User can choose to borrow it or reserve it if needed. Once borrowed, the User must return the book on time. If returned late, a fine is imposed. The process also allows the User to borrow additional books after completing a transaction. Finally, the Admin manages the borrowing records to complete the process.

## User Management

act [User Management]

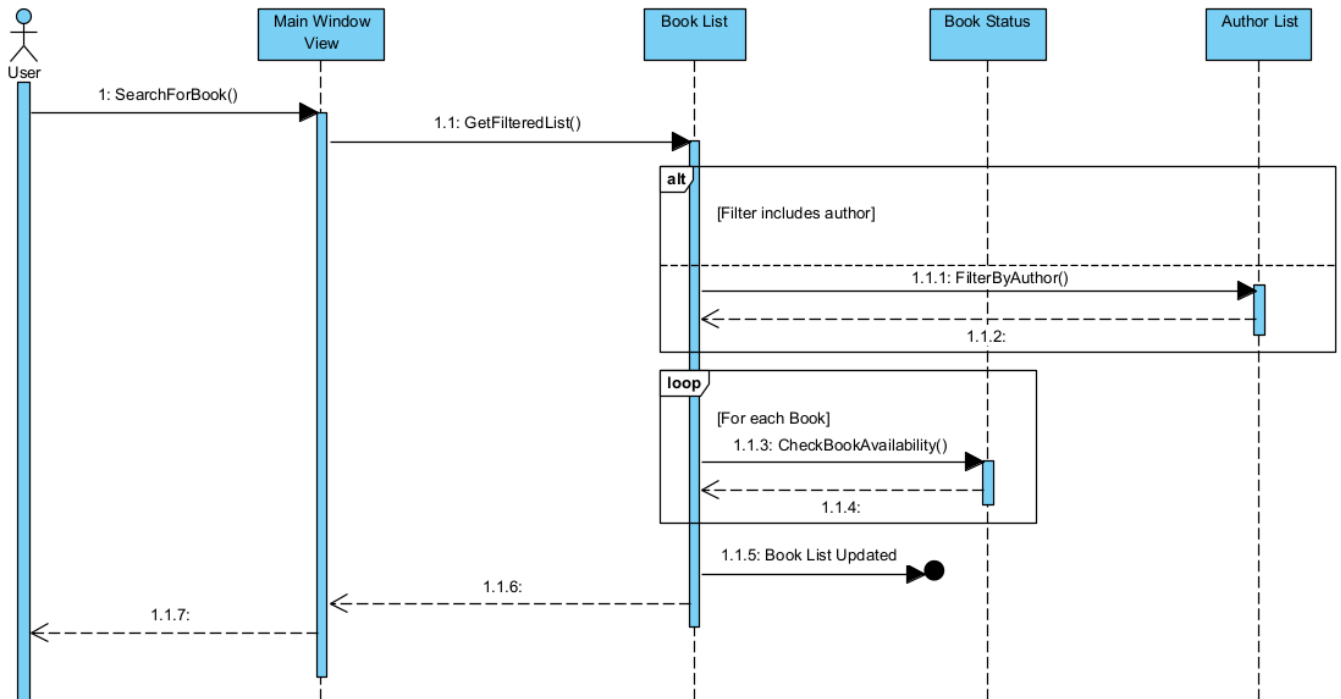

**Actors:** Admin, User

For Users, the process begins by checking if they already have an account. If they don't, they are prompted to register. If an account exists, they proceed to log in. Once logged in, the User can view their profile details. If necessary, the profile can be updated or deleted, depending on the User's needs.

On the Admin side, they can search for users and manage user roles, ensuring proper access control within the system. The diagram shows the various pathways that can be followed depending on the User's actions, such as updating or deleting their profile, while also illustrating the admin's ability to oversee user roles and account management.

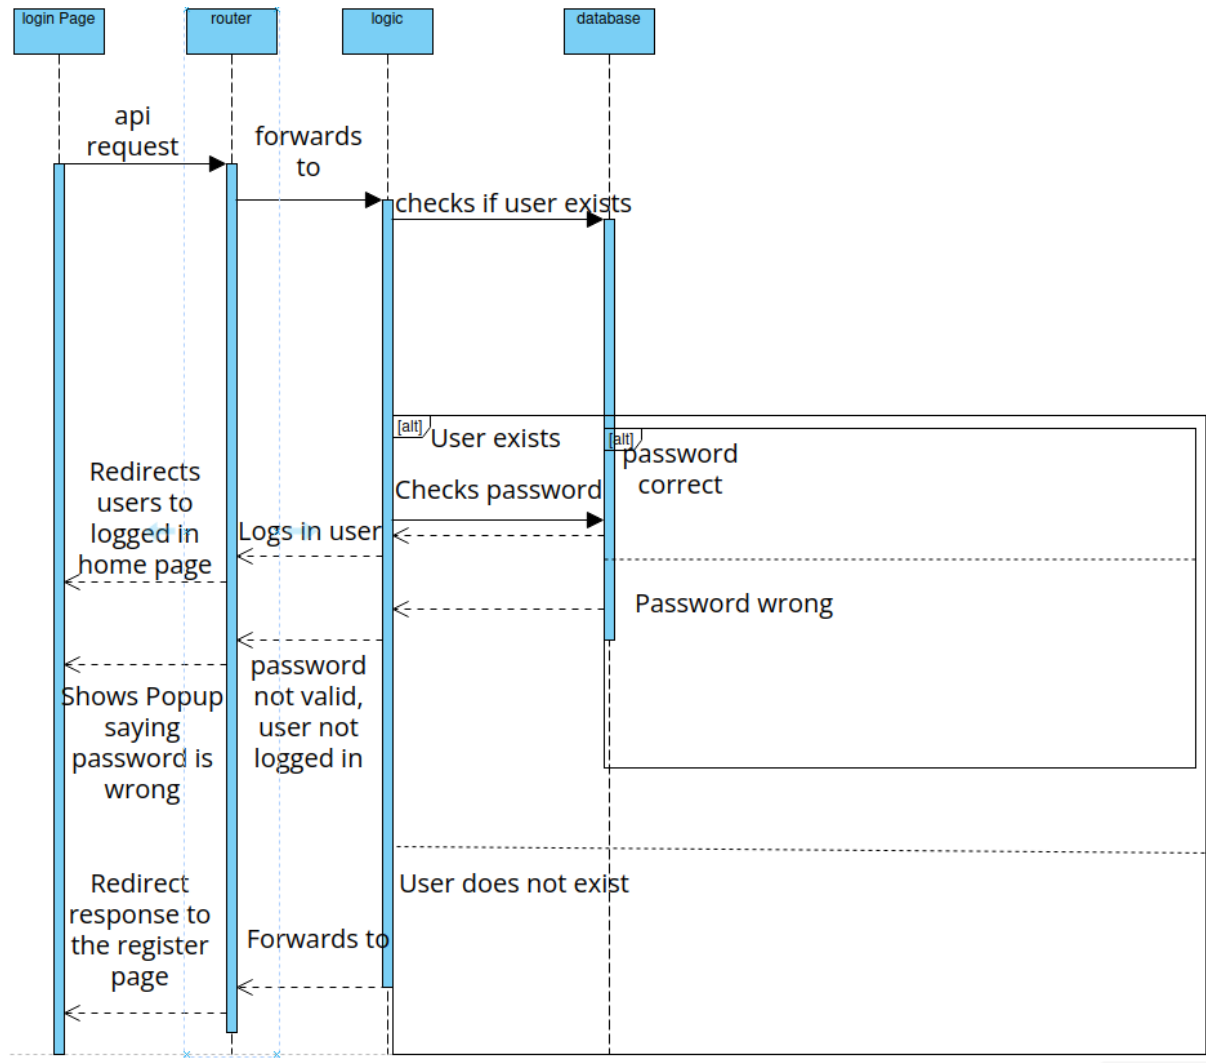

## Sequence diagrams

### Book Filing

**sd** [Book Filtering]

The Sequence begins with the User initiating a `SearchForBook()` request in the Main Window View. The Main Window View then sends a request to retrieve a filtered list of books (`GetFilteredList()`) to the Book List component. If the filter criteria include an author, the Book List interacts with the Author List to apply `FilterByAuthor()`, updating the list accordingly. Once filtered, the Book List updates, and the filtered list is returned back through the Main Window View to the User.
